

S.L.A.M. Safety

The First Step Is... **STOP**

- It is important that each employee stops and considers the work at hand, and can it be done safely?
- Are you properly trained?
- Do you have the knowledge & skills?
- Do I need help? If so, get it!

Next is...**LOOK**

- Before starting your job, take a look and identify potential hazards, and continue throughout the task
- In many cases, new hazards present themselves, be alert and prepare to address them

Next is...**ANALYSE!**

- Do you have everything you need to do the job safely?
- Do you have the proper tools & protective gear
- Does everyone know their role to accomplish the task?
- Is there someone you need to notify prior to beginning the

Finally...**Manage!**

- Safety can be managed by developing and implementing procedures. We need to eliminate hazards and reduce exposure:
 1. Follow standard operating procedures
 2. Use the correct protective gear
 3. Don't hesitate to ask for help
